

Orb billing engine

Smarter billing. Faster growth.

Empower your team with a flexible, accurate billing engine that accelerates revenue growth. Orb helps companies operationalize complex pricing, automate revenue workflows, and scale with confidence—all from a single, flexible platform.

Seamless integrations across your finance stack

Orb integrates easily with your existing tools and workflows, with no disruptive migrations required. Ingest usage events via CSV or API, connect to ERP systems, and sync with payment processing, tax calculation, accounting, and AR platforms.

 **Flexible:** Redefine billable metrics and update pricing models without rebuilding aggregation pipelines or re-ingesting events.

 **Accurate:** Backfill usage or adjust pricing logic, and Orb automatically updates invoices, credit ledgers, and dashboards.

 **Transparent:** Trace every line item to underlying events, so customers know what happened, when, and why they were billed.

Why Orb?

Orb gives your teams the power to transform billing from a blocker into a growth engine.

 **Accurate:** Ingest and process all raw event data while making it easy to correct usage and backfill or adjust bills so your team can maintain trust and control without revenue leakage.

 **Scalable:** Orb is built for extensibility. Our API handles high-scale data ingestion while giving you the flexibility to adopt the tools you need and integrate seamlessly with the systems you already use.

 **Customer-first:** A transparent billing experience makes it easy for customers to understand what they're paying for and why.

"Pricing and billing are no longer blockers to our engineering velocity and our entire organization is on the same page when it comes to usage metrics and billing."

Dan Carter, Director of Engineering, Vercel

Move at the speed of your product with flexible tools to support evolving monetization strategies.

- **Price modeling and evolution:** Easily define, update, and version pricing models using Orb's intuitive UI and SQL.
- **Backfills and backdating:** Retroactively adjust event data and pricing without correction events.
- **Metering:** Use Orb's scalable API to ingest raw usage data in real time, enabling accurate billing and data-driven pricing simulation.

Ensure your invoices are always right and easy to verify without burdening your engineering team.

- **Auditable records:** Every charge is traceable, with a complete audit trail for compliance, transparency, and trust.
- **Invoicing:** Generate clear, detailed invoices that break down charges by usage, so your customers (and your finance team) know exactly what's being billed.
- **Accurate billing:** Turn millions of usage events into precise invoices, reducing billing disputes, eliminating revenue leakage, and improving cash collection.

Remove the repetitive billing work that piles up as your company scales.

- **Seamless integrations:** Built to plug into your financial stack, from CRMs like Salesforce to accounting and tax tools.
- **API-first extensibility:** High-scale ingestion, metric definition, and billing logic powered by a developer-friendly platform.
- **Unified workflows:** Metering, pricing, billing, invoicing, and reporting work as one system, eliminating silos and reducing operational overhead.
